What is a City?

Physical components of cities include:

- Physical boundaries
- Population size
- Hinterland
- Natural infrastructure
- Built infrastructure
- Transport links to other cities & countries

Data from Census 2001

More than infrastructure

Cities emerge from the demand for populations to interact and are about people:

- Poverty and wealth
- Culture and diversity
- Social inclusion/exclusion
- Crime
- Demographics, e.g., ageing population
- Overlapping systems of governance
- Legal designation

Current Trends in the UK

London is outperforming the rest of the UK economy.

Our largest cities lag behind London in terms of their performance – and lag behind their European rivals in terms of levels of GDP per capita achieved.

Cities do not work in isolation – the networks and interactions between them are important.

Growth in output (nominal Gross Value Added) 2007-2011

Note: Regional GVA not adjusted for inflation

Future challenges and opportunities

- Demography - Ageing population
- Economic competitiveness
- Governance
- Climate change
- Technology
- Sustainability – energy, waste, resilience
- International competition
- Network of cities

Key Questions:

What are the key enablers of success for different cities?

What are their most important decisions in preparing for the future?

UK population change 1999-2009 by local authority

Foresight – Future of Cities Project

- Public policy is delivered via cities, which are centres of innovation and growth
- Foresight project will take a cross government interdisciplinary approach, building on existing work.
- Aim to provide a holistic understanding of the challenges and opportunities UK cities will face in the future
- Seeking input in order to shape project and focus outputs on most important questions facing policy makers
